ABOUT ME

AI and Data professional with 9+ years at BMW, specializing in enterprise data, AI enablement, and digital transformation. Experienced in collaborating with AI developers, validating LLM solutions, defining AI use cases, and driving AI adoption within Indirect Purchasing. Proven ability to bridge business stakeholders, enterprise data, and AI technologies to deliver scalable business value.

WORK EXPERIENCE

2024– Current Munich, Germany

Digitalisation Specialist BMW AG

AI Product Enablement & Stakeholder Management

- Coordinated AI enablement initiatives within BMW Indirect Purchasing by identifying business use cases, supporting model validation, and facilitating adoption of AI-powered solutions.
- Served as the interface between procurement stakeholders and AI development teams, translating business requirements into functional use cases, evaluation criteria, and actionable feedback.
- Provided domain expertise for supplier profiling, procurement analytics, and purchasing-process optimization throughout solution design, testing, and rollout.
- Contributed to prioritization and roadmap discussions for AI use cases within the Indirect Purchasing transformation program.
- Supported AI transformation activities within Indirect Purchasing by identifying business processes suitable for AI adoption, gathering stakeholder requirements, and driving business acceptance of AI-powered solutions.

Enterprise Data & AI Enablement

- Created Celonis Knowledge Models to codify business logic and master-data relationships for reliable analysis preparation.
- Created Meta Objects from CBW queries to support supplier profiling and advanced querying in the Supplier Profiler (MaBon).
- Implemented Query Enablement and Query Definitions to standardize reporting requirements and accelerate data delivery.
- Designed and executed business-driven LLM evaluation using Golden Questions, procurement scenarios, and measurable success criteria to validate AI-generated outputs and improve model reliability through structured feedback to AI engineers.
- Collaborated directly with AI developers, data scientists, and product teams to define, refine, and prioritize enterprise AI use cases for Indirect Purchasing.
- Acted as the bridge between business stakeholders and AI development teams, translating purchasing requirements into AI-ready business scenarios and acceptance criteria.
- Identified high-value business opportunities for AI adoption and provided domain expertise throughout the solution lifecycle.
- Promoted adoption of AI-powered solutions through demonstrations, feedback sessions, and continuous business engagement.

Data Quality & Automation

- Developed Python scripts and a standalone Python application to validate large Indirect Purchasing datasets where manual testing was infeasible.
- Implemented automated validation and regression checks, reducing testing effort from days to hours.
- Built Power BI dashboards to monitor validation results and data quality, ensuring alignment between CBW data and dashboard outputs.
- Executed validation across 18 capturing systems and established quality-management processes for data integrity, traceability and test artifacts.
- Standardized Jira/X-Ray test cases and governance, improving traceability and coverage of validation activities.
- Established validation methodologies and quality assurance processes for AI-enabled applications, ensuring robust and trustworthy business outcomes.
- Defined test strategies, acceptance criteria, and traceability frameworks for AI and analytics solutions across multiple enterprise systems.

2017– 2024 Dingolfing, Germany

IT QUALITY SPECIALIST BMW AG

SAP BusinessObjects / Enterprise Reporting

- Developed and maintained complex BO universes using Information Design Tool (IDT), including the IPSQ reporting universe, to meet enterprise reporting requirements.
- Automated threshold-value extraction from Oracle Database and automated report generation for pre-series and series processes.
- Optimized BusinessObjects reports and universes for high-volume enterprise usage, implementing security and access controls to ensure performance, data integrity, and compliance with corporate standards.
- Streamlined report-development processes, reducing turnaround time by 20%, and coordinated offshore teams for development and deployment.
- Provided operational support for approximately 5,500 report instances per day and delivered end-user training and technical support.

Palantir Foundry

- Contributed to a Palantir Foundry proof of concept by developing near-real-time interactive dashboards.
- Implemented data-governance practices to maintain integrity and security of data powering dashboards.
- Received recognition for consistently delivering high-quality reports that exceeded stakeholder expectations.

Amazon QuickSight

- Contributed to an Amazon QuickSight proof of concept and implemented threshold-based alerts to highlight significant changes and anomalies.
- Worked with SAP BO universe result sets and Cloud Data Hub data and validated the performance and accuracy of predictive models against business requirements.

Oracle APEX

- Rolled out an application to 17 technologies and more than 2,000 users across international plants.
- Managed international deployment, maintenance, upgrades and troubleshooting.

05/2017 – 10/2017 and 10/2016 – 03/2017 Dingolfing, Germany

Software Developer intern BMW AG

- Designed and developed a quality-management portal using APEX, Oracle Database and PL/SQL, including real-time KPI retrieval.
- Integrated SAP BusinessObjects reports and developed PL/SQL plugins to extend application functionality.
- Modernized QCockpit reporting tools into a real-time application using Java EE, GlassFish and PostgreSQL.
- Analyzed requirements and designed application architecture.

07/2014 – 08/2015 and 06/2011 – 08/2012 Karnataka, India

Web Developer WebNock

- Designed responsive websites and content-managed solutions using Drupal, HTML and JavaScript.
- Managed hosting, maintenance, performance and security while translating customer requirements into reusable web solutions.

EDUCATION AND TRAINING

2015 – 2017 Rouen, France

Master of Science (M.Sc) in Automotive Embedded Systems Esigelec

2015 – 2017 Karnataka, India

Master of Engineering (M.E) in Automotive Embedded Systems MIT

2009 – 2014 Karnataka, India

Bachelor of Engineering (B.E) in Computer Science VTU

DIGITAL SKILLS

AI & Data: LLM Evaluation | AI Use Case Design | Foundation Models | Data Governance | Knowledge Modeling | AI Testing | Supplier Analytics | Enterprise Data

AI Delivery: Stakeholder Management | Requirements Engineering | Test Strategy | Acceptance Criteria | Cross-functional Collaboration

SAP & Enterprise: SAP CBW | SAP BusinessObjects / IDT | Oracle | SRM | Coupa

Analytics & Platforms: Power BI | Celonis | Palantir Foundry | Amazon QuickSight | Tableau | AWS

Development: Python | SQL | PL/SQL | Oracle APEX | PostgreSQL | HTML | CSS | JavaScript | Java EE
